

# Precision you can build on.

Cold-formed steel framing, roll-formed offsite to tight tolerances and engineered for predictable performance.

## ENGINEERED PERFORMANCE

---

- **Structural capacity** — engineered to AS/NZS 4600 for cold-formed steel.
- **Dimensional accuracy** — factory roll-formed for straight walls and square openings.
- **Non-combustible** — steel framing supports fire-rated wall and floor systems.
- **Durable** — galvanised steel won't shrink, warp, rot or feed termites.
- **Lightweight** — high strength-to-weight cuts structural load and foundations.

## THE LIGHT GAUGE STEEL RANGE

---

### 01 Wall Framing Systems

Load-bearing and infill wall frames for residential and commercial builds.

### 02 Floor Joist & Bearer Systems

Long-span steel floor systems engineered for stiffness and service integration.

### 03 Roof Trusses & Rafters

Engineered roof framing for both complex and conventional roof forms.

### 04 Lintels, Bracing & Connections

Engineered structural components for a complete framing package.

### 05 Volumetric & Modular Frames

Pre-assembled steel modules and panels for offsite and prefabricated builds.

### 06 Mid-Rise Structural Framing

Cold-formed steel framing systems for low- to mid-rise structures.
